

1. SharePoint: Select a Visio file to display

User should be able to browse and select a Visio diagram from a document library from any website, from his OnDrive folder, or upload a new file to a SharePoint site (select target location and upload the file).

The web part should by default show this file using Visio online viewer, with the default settings.

2. SharePoint: Select a file display as full page

User should be able to use “Full Bleed” page. When he creates a page, he should be able to select “Diagram Frame” as application, and then again select a file to display on that page like in point (1)

The selected diagram should occupy whole page by default.

3. Teams: Select a Visio file to display in a tab

User should be able to browse and select a file to display in the tab. By default, the file should be displayed full-screen.

4. SharePoint, Teams: Selecting display options

User should be able to change the file display options:

- **Default zoom** (the file should be zoomed on the first load to the specified zoom factor)
- **Width, Height** of the display area. The diagram should occupy the specified space.
- **Turn on/off Visio UI items.** The diagram should be displayed respectively with or without these items.
 - Toolbar
 - Frame
 - Background
- **Turn on/off diagram interactivity options,** including:
 - Hyperlink navigation
 - Pan
 - Zoom
 - Pan/Zoom window
-
